

Can I solve addition questions in different ways?

Work these out using objects.

$11 + 6 = \underline{\quad}$

$8 + 7 = \underline{\quad}$

$13 + 7 = \underline{\quad}$

$16 + 0 = \underline{\quad}$

Work these out using a number line. Remember to circle the biggest number and draw the right amount of jumps by looking at the other number in the number sentence.

$6 + 7 = \underline{\quad}$

$11 + 7 = \underline{\quad}$

$9 + 10 = \underline{\quad}$

$4 + 13 = \underline{\quad}$

An adult will read these problems to you. You can choose how to work them out either by using objects or a number line or maybe you want to do a mix of both!

If you had 8 glass bottles and 4 plastic bottles, how many bottles would you have altogether?

There would be  $\underline{\quad}$  bottles altogether.

A giraffe has 13 spots. Another giraffe has 5 spots. How many spots do they have in total?

There are  $\underline{\quad}$  spots in total.

Tam has 12 marbles. She is given 5 more. How many marbles does she have now?

Tam has  $\underline{\quad}$  marbles.
