

Can I sort 3D shapes?

Can you explain which shape is the odd one out?

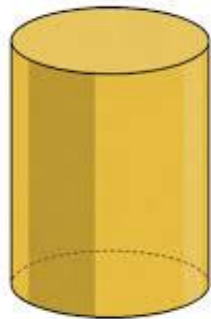

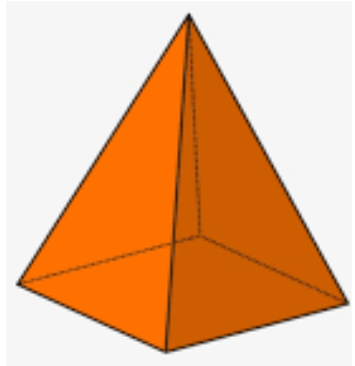

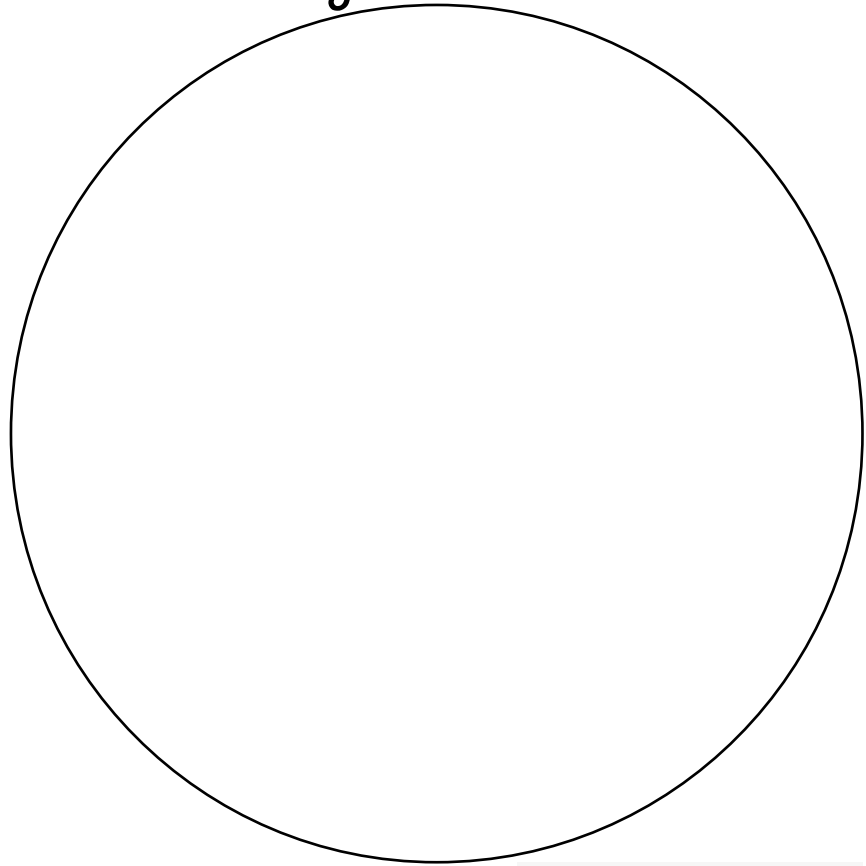

Can you explain which shape is the odd one out?

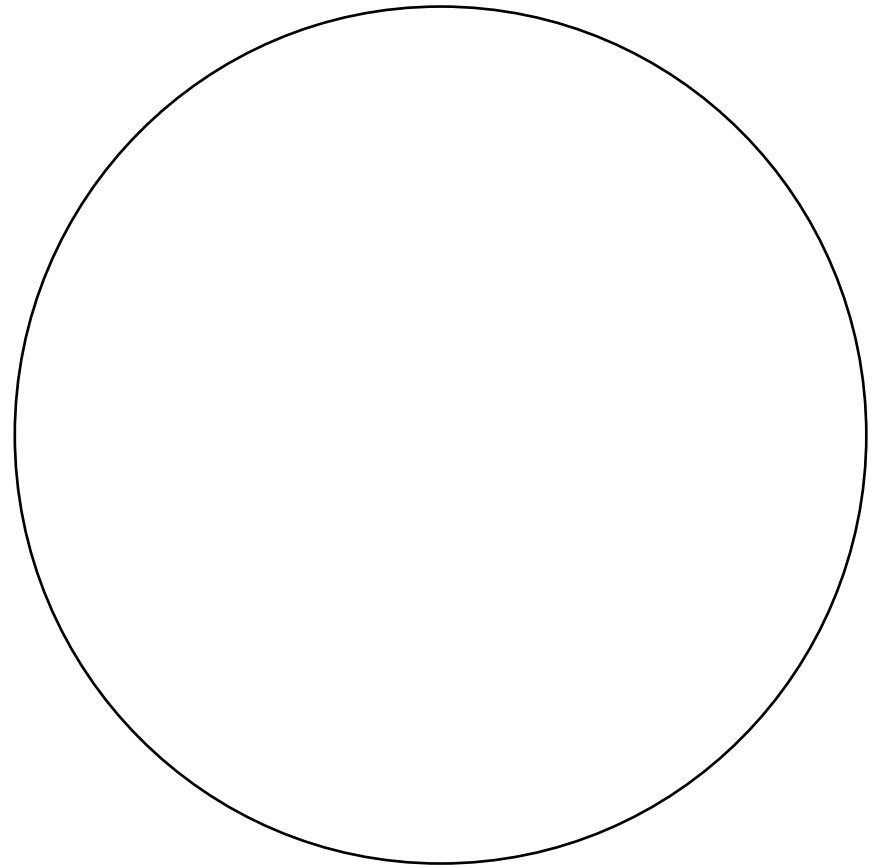

Sort the shapes out into the groups. Talk about it with an adult.

cylinders

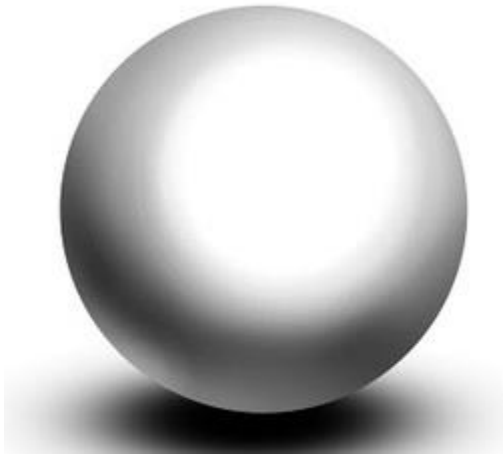

pyramids

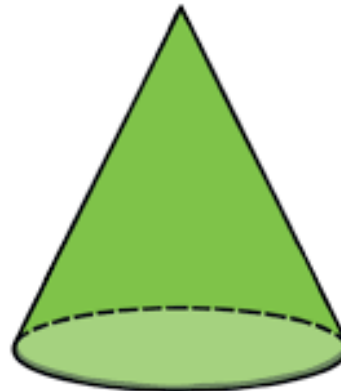

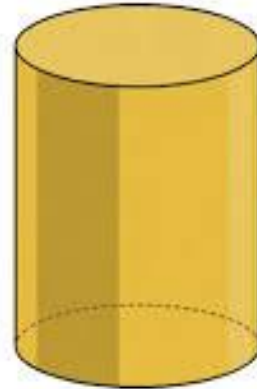

Look at these shapes again.

This shape can roll because it has a curved face (the face on a 3D shape is the surface we can touch).

These shapes can roll and stack (put on top of another shape). It has a curved face and flat faces.

What do you think about these shapes? Can they stack or roll? Why?
