

Homework week commencing 15th January 2024

Well done for all your maths calculations; please collect your house points in class!

This week we are focussing on Science, and our work on Forces. I would like you to identify the frictional forces that either increase or decrease the speed of an object.

Remember the more friction, the slower an object move across the surface.

The less friction, the faster an object moves across the surface.

All the best!

Kind regards,

Mrs Padam
